

PARTICIPANTS NEEDED FOR RESEARCH ON DIGITAL SKILLS TRAINING IN THE AGRICULTURE AND ENVIRONMENTAL SECTORS

We are looking for current industry professionals, educators, and post-secondary student volunteers to take part in a study on digital skills in education and the workforce. The study examines how digital skills are taught in post-secondary programs, how familiar learners and workers are with digital tools, and the digital skill competencies needed in agriculture and environmental sectors.

As a participant in this study, you would be asked to complete an anonymous online survey about your experiences with digital skills in education, training, and the workplace. The survey should take about 15-25 minutes to complete.

Participate in this study by filling out the survey here!
